# CRYSTAL SPRAY ACTUATOR

V21.112

## CRYSTAL ACTUATOR FOR PRESS-DOWN VALVES WITH STEM Ø 3.9

V21.112: *Crystal* spray actuator with micromist insert, for aluminium cans Ø max 45 mm. Can use all micromist inserts described at page 2.0.02.

V21.113

V21.113: *Crystal* anti-perspirant actuator with directional insert, for aluminium cans Ø max 45 mm. Can use all directional inserts described at page 2.0.02.

## FEATURES

Crystal is a snap-fit valve-cover actuator (it snaps into place over the valve) for Coster valves with standard Ø 3.9 mm stems.

Crystal fits the market requirements for ecological products: its shape, conformation (no side walls) and quality of moulding (allowing a reduced thickness), imply minor consumption of plastic material.

In terms of styling, the Crystal actuator features a transparent crystalline cover with the activation zone protected by an unbreakable seal.

The finished article is thus a single unit, both practical and available for immediate use, with no need for a protective cap.

Both the actuator key and the cover can be produced in any number of different translucent colours.

The actuator is available in two versions: with micromist insert and with directional insert. The former is suitable for alcohol-based deodorants; the latter is suitable for products containing components in suspension, such as anti-perspiration deodorants (AP).
